

-Lecture on environment and recycling business at Chuo University, faculty of economics-

As the guest teacher, Atsushi SUGIYAMA and Mai FUJITA, had opportunity to share our business philosophy and challenge regarding environment and recycling business in Japan and Thailand with undergraduate of Chuo University. They are now conducting research about environment and recycling business in developing countries.

Associate professor So SASAKI, the researcher of this seminar, has engaged in researches of environment and recycling business in Asian countries, policy makings of recycling, supports for Japanese company's oversea expansion. Undergraduate of this seminar conducts research to solve environmental problems such as garbage dumping and heavy traffic jam in Asian countries. As a part of "studies in global fields", the programs of this seminar, they visited Asian developing countries, Thailand and Vietnam. They had interviews with related parties and came up with idea, proposal, which shall contribute to solving issues.

In the lecture, we introduced the present state of environment and recycling business in Japan, business scheme and the new business in Thailand. We actively discussed obstacles to solve those problems and how we can connect the solutions of social problems with business. We appreciated to have a chance to exchange idea and experience each other.

We are delighted if our lecture would help their research of environmental conservation and building of a sustainable society.
